**Tackling health problems in remote areas with CSR**

When we think about health providers in Indonesia, we immediately think of the lack of infrastructure, low education levels among the population, and lack of medical facilities. Their beautiful natural landscapes, forests and mountains, and local wisdom are often told like stories in off-the-beaten-track places.

Then there comes the blames on the government for not and its partners in development. Solutions to these problems also require community involvement. There are many examples of successful CSR programs in tackling health problems in remote areas.

**Empowering Puskesmas through Pencerah Nusantara**

Young university graduates take part in the yearlong Pencerah Nusantara (PN) program to provide education to rural communities, including those in far-flung and hard-to-reach areas to foster a healthy paradigm through partnerships. These students are often faced with the challenge of working in remote areas to improve the health of the community.

We think that there is much that we can do to improve the health of the community, but this is not enough.
